Workflow Overview

BRAND REPUTATION

This workflow assists business in the nonstop task of tracking brand reputation in real-time, this enables businesses to keep informed about public perception and media coverage effectively.

AUTOMATED REPORTING

By integrating Google Sheets and automated email functionalities, this workflow produces timely sentiment reports, allowing stakeholders to receive insightful updates without manual effort.

How It Works

This workflow is run manually using the Execute Workflow button, which functions as a manual trigger. Each execution reads the keyword and email from the Google Sheet, then RSS pulls Google News articles, cleans and aggregates them, and sends them to Gemini AI for analysis the workflow deliver structured reports via Gmail.

The workflow is pretty flexible. If you need a sentiment analysis of a news link or paragraph it will read and assist with that as well.

Output

The workflow produces a structured sentiment analysis report that includes a brand profile that describes how the subjects are portrayed. A Media Character Analysis – a narrative summary that explains the media depiction of the subject. The analysis also discusses the tone, themes, and patterns of the headlines. The analysis includes an AI interpretation of the headlines. In addition, the analysis provides Sentiment Scores, whether news is positive, neutral, or negative, it provides a trustworthiness score, and practical recommendations based on the complete analysis.

Example Output

The AI-generated sentiment summary showcases the ability to extract tone from multiple headlines, providing a clear and concise **overview of insights** delivered via email.

Some specific feedback that can benefit nike:

- It shows Nike what the media is saying right now — what's positive and what needs attention.
- It points out things that could hurt the brand, like discounting or mixed financial headlines.
- It gives clear suggestions Nike can use to boost their image, fix weak spots, and stay ahead.

The Business Value of Automation

This workflow helps brands understand how they're being talked about in the news by automatically pulling articles, analyzing the sentiment, and sending quick, easy-to-read summaries. It saves teams valuable time and provides clear insights they can use to protect and grow their brand. It's especially useful for PR teams, marketers, founders, and analysts who need to stay on top of reputation changes and spot potential issues early before they turn into bigger problems.
